FLOWER POP UP CARD

Design by: [Beryl](#) (3 Projects)

About me: I went to Art School in my younger days. I am a 3D Google Earth Modeler (the 3D buildings you see on Google Earth) I love paper sculpture, origami and using paper in new ways.

Project skill level: moderate

Project time: 1 hour to 2 hours

Project tags: [Birthday](#) [Thank You Cards](#)
[Modern Celebration Cards](#) [Outdoors Cards](#)

[Just Because Cards](#) [Friend Cards](#) [Naturalist](#)

I wanted to use basic shapes (the ones that are standard with my Cricut mini) to create a pop up birthday card for my daughter in law, Theresa. She's a gifted gardener so it had to be flowery and use natural colors.

CRICUT®: WHAT WAS USED

Cricut® George and Basic Shapes Cartridge

Cricut Mini® Personal Electronic Cutter

OTHER MATERIALS NEEDED

Card Stock Paper Adhesive

PROJECT CUT FILES

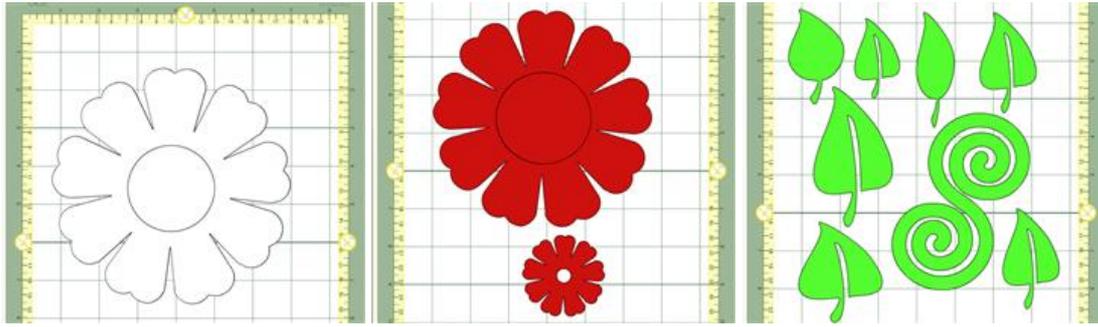

[FlowerPopUp.ccr](#)

STEP 1

Cut Layer 1- Large outside Flower (White Card Stock).

Cut Layer 2- Dark Red Inside Flower

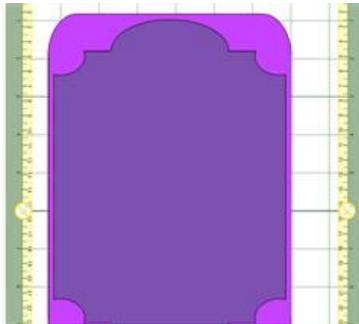

Cut Layer 3 - Various Leave and Curly stem pieces .. continue to cut remaining layers for Card Base and Inside decorative Inset. (two layers of card stock add sturdiness to the pop up mechanism. The Flowers will pull the stems and petals open.

Layer one- white petals

Dark Red Petals Layer

Leaves and Stems

Card and Inside Piece

STEP 2

After cutting pieces, fold inner and outer card piece in half and score with pressure so there is a good gully fold down center.

card and base glued and scored

STEP 3

Photo shows the glue tab locations that will help the petals pull outward when the card is opened. Small scraps of cardstock can be attached on each side of the back of the shaped petals.

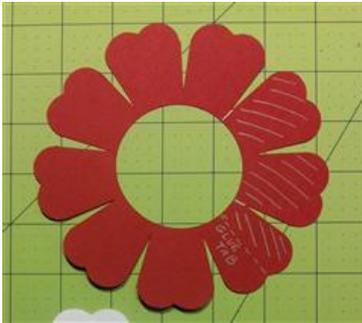

Card with Glue Tab Locations

STEP 4

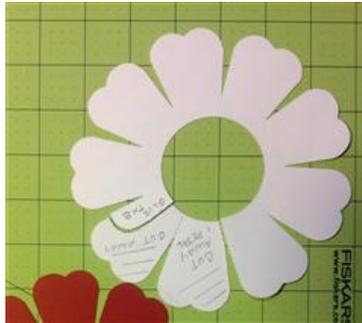

Small scraps of matching cardstock are used to make glue tabs (attach to the back of the shaped petals) These will be glued to either side of the center fold. The action of the card opening will pull the petals outward, creating the "pop out" effect. Photo below shows tabs attached to the back of the petals.

STEP 5

To create a slight cone effect for the petals, you will cut out two or three petals, leaving part of the last one to act as a glue tab. See photos below for illustration of cut out areas and glue tabs.

Inner Petals with cut location

Outer Petals with cut location

STEP 6

After glueing the the petals in a cone shape, so they appear 3D, not flat... fold the petals so they form a center fold, which will be aligned with the card's center fold. Begin with the outer, white flower, then the red then the center petals. Glueing the tabs down in same location on either side of the center fold.

Glue Tabs and align outer petals

Inner petals glued and aligned with fold

Center petals attached and lined up with fold

STEP 7

Finish card by attaching leaves and stems in various spots. Keep checking that the card will fold flat as you work. The spiral pieces (stems) can be attached to the card base at one end, then find a spot behind a petal.. making sure it will lay flat when the card is closed. Every card can be totally unique, depending on colors used and placement of leaves and stems.
